

## Campus Safety During COVID-19

Since the start of the COVID-19 pandemic, Logan University has abided by all guidelines recommended by the Center for Disease Control and Prevention, the Missouri Department of Health + Senior Services and St. Louis County.

With that, Logan has implemented many safety precautions and social distancing practices to help safeguard the health and wellbeing of our students, faculty, staff, patients and guests.

- **Self-screening procedures.** All individuals planning to come to campus should take the following [self-screening questionnaire](#) before arriving. An answer of “yes” to **any** of the questions should result in an individual staying home and contacting their health care provider or the local health authority to seek advice about evaluation/testing. **Be prepared to answer these questions when you arrive on campus prior to entering any facility.**
- **Temperature screening.** Temperature screenings, using infrared contactless thermometers, are conducted every day for individuals upon entering Logan facilities. Individual that have been screened and cleared to enter the building are issued a color-coded wristband to confirm that have been screened. Wristbands must be worn while on campus.
- **Face coverings.** All individuals should arrive to campus with a face covering; and are required to wear a face covering in any campus facility. Face coverings should not confer a false sense of protection and social distancing should still be practiced. Compliance with coverings is more so to protect the health of others. Any individual arriving to campus without a covering may have one issued during screening at designated building entry points.
- **Social distancing and safety practices.** In general, individuals are to maintain a distance of at least 6 feet from other people whenever possible. Social distancing via limited seating throughout campus and one-way traffic in high traffic areas has been implemented. Where possible, Logan has installed physical barriers, social distancing markings, and posted signage.

Additionally, Logan has enacted more frequent and rigorous cleaning and disinfecting procedures on campus, including:

- Disinfection of all areas of the University daily using a misting gun with the product Vital Oxide
- Multiple cleanings of all classrooms, including desks and chairs, as well as handrails and doorknobs, throughout the day
- Installation of more hand sanitizer dispensers throughout campus
- Multiple cleanings of all adjusting tables, exam tables in the clinic and labs, as well as other hard surfaces, throughout the day

Logan continues to closely monitor the COVID-19 situation on a daily basis and will follow any changes or recommendations issued by the state or county.
